

Breathalok Breathalyser

The Breathalyser prevents a vehicle from being operated by an individual whose blood-alcohol level is higher than a pre-determined level.

Features:

- The VBS (Vehicle Blocking System) stores all records and sounds an alarm for over-limit incidences.
- Graphic displays give prompts for correct operation, and Breathalyser “Pass” or “Fail” test results.
- The VBS is wired directly into the vehicle starting circuit to prohibit starting by operators who do not pass the test.
- Menus are accessible by authorized personnel.
- On-site and on-vehicle calibration performed.
- Breathalyser mouthpieces supplied are individually wrapped and sealed.
- Disposable, hygienic mouthpiece.
