

Breathalyser

The Breathalyser provides protection from a vehicle being operated by an individual whose blood alcohol level is higher than a pre – determined level.

Features:

- The VBS (Vehicle Blocking System) stores all records and sounds alarms for over limit incidences
- Graphic display gives prompts for correct operation and Breathalyser Pass or Fail test results.
- The VBS is wired directly into the vehicle starting circuit to prohibit starting by operators who do not pass test.
- Menus accessible by authorised personnel.
- On site and on vehicle calibration performed.
- Breathalyser mouthpieces supplied individually wrapped and sealed
- Disposable hygienic mouthpiece
