

Fatigue Monitor

The MR688 Fatigue Monitor is easy to use and will give an early warning when detecting driver-fatigue or total loss of eye detection when operating a vehicle.

Features:

- Applies advanced face-recognition and patented pupil detection technology
- Driver fatigue can be predicted, and prompt warnings given
- Sends real-time information to GPS tracking system for fleet management
- Can be used normally even when wearing glasses, sunglasses, and contact lenses
- Day or night driver detection
- Does not operate below 10km/h – prevents false alarms when reversing
- Compatible for all types of vehicles
