

Night-vision Light-emitting Paint

The NiteSight range of coatings has been developed to meet the ever-increasing need to protect the environment from volatile organic compounds.

All NiteSight coatings are water-borne polymers of the acrylic family, and as such exhibit exceptional UV resistance, and superb light transparency.

NiteSight coatings have excellent flexibility and hardness that resist cracking or scratching of the coatings when applied to rigid or non-rigid surfaces.

NiteSight coatings are non-toxic with zero volatile organic compounds and are classed as non-hazardous in accordance with Worksafe Australia.

Please refer to the relevant MSDS for full details regarding safety.

NiteSight coatings are one-part products, requiring no added catalyst to cure, but rely instead on the evaporation of the water content to allow the complex polymer components to link-up and form the cured plastic base.
